DETAILED ACTION

New Examiner

 The Examiner of you Application in the USPTO has changed. To aid in correlating any papers for this application, all further conrespondence regarding this Application should be directed to Art Unit 1648, Examiner Stuart W. Snyder.

Election/Restrictions

2. Applicant's election **without** traverse of Group I, Claims 1-17 in the reply filed on 12/11/2006 is acknowledged. However, upon reconsideration, futher restriction is required—see below.

Group I, claims 1-17, drawn to a method of inhibiting replication of a virus comprising contacting a nucleocapsid protein of th evirus with a compound having the structure defined in the claims.

Group II, claims 18-19, drawn to a compound having th structure defined in the claims.

3. Groups I and II both contain claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

A. Compounds of the general structure of Claim 1; antimony-containing substituted phenyl compounds and

Application/Control Number: 10/528,747 Page 3

Art Unit: 1648

B. Compounds of the general structure of Claim 3 having 2 substituted phenyl rings separated by C=X Species.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

Species A: Claims 1-2

Species B: Claims 3-6

The following claim(s) are generic: 7-19.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

The technical feature that is shared between Species A and B is the phenyl chemical group. In the instant Application, the structure defined for the compound of Species A is an antimony-containing compound that also comprises a phenyl

Art Unit: 1648

group; whereas, the compound of Species B is compound comprising a diphenyl group. Hence, the technical feature that is shared between the inventions listed as Species A and B is the phenyl group. However, this technical feature does not provide a contribution over the prior art, as evidenced by Kuriyama *et al.*Kuriyama *et al.* teaches an antimony containing compound that also comprises a phenyl group, [Line 50, column 4]. In the absence of a contribution over the prior art, the technical feature shared between the inventions of Species A and B is not a shared special technical feature. Without a shared special technical feature, the inventions listed as Species A and B lack unity with one another.

4. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the Claims encompassing the elected species. The election of a species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Application/Control Number: 10/528,747 Page 5

Art Unit: 1648

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stuart W. Snyder whose telephone number is (571) 272-9945. The examiner can normally be reached on 9:00 AM-5:30 PM. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bruce R. Campell can be reached on (571) 272-0974. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
